PROFESSIONAL SUMMARY

QA Automation Engineer with nearly 4 years of experience testing web and mobile applications across logistics, government, and EdTech domains. Builds end-to-end UI automation with **Playwright (TypeScript)** and **Selenium WebDriver (Java)**, mobile automation with **Appium** and **Maestro**, and API tests with **Postman**. Designs scalable frameworks using the Page Object Model, fixtures, and centralized test data, backed by strong manual testing, SQL data validation, and test documentation. Uses AI-assisted tools to speed up script development, locator debugging, and root-cause analysis. Works comfortably in Agile/Scrum teams and with clients, from sprint planning through UAT sign-off.

PROFESSIONAL EXPERIENCE

Software Tester

Mar 2026 – Present

Kale Logistics Solutions Pvt. Ltd.

Kale Freight Management System — air cargo & logistics platform · Team of 10

- Built a **Playwright (TypeScript)** end-to-end suite for the Galaxy V3 cargo web application, automating a complete import cargo workflow (flight, ULD, AWB, and warehouse delivery order) as 10 chained scenarios.
- Designed a **four-layer automation architecture** (core utilities, page objects, business workflow layer, thin test specs) with Playwright fixtures and storageState login reuse, structured to scale to 217+ planned scenarios.
- Solved ASP.NET WebForms automation challenges, including autocomplete fields that need real keystroke events, postbacks that silently reset field values, and client-side password encryption handled via `page.addInitScript()`.
- Centralized test data in a single TypeScript module that generates runtime values such as flight numbers, ULD IDs, and valid AWB numbers using the IATA check-digit rule.
- Automated the Galaxy HHT Android handheld app with **Maestro** and **Appium (UiAutomator2)**, covering login, time-picker, list selection, and scrolling flows; fixed failing locators by switching to native resource-ID selectors.

- Created and maintained **Testsigma** test cases, groups, and execution suites for shipment management; executed smoke runs and built dynamic, data-anchored locators with runtime variables.
- Documented 8 Testsigma mobile automation defects (Flutter rendering and semantics gaps) in a structured issue report and drove them through 5 vendor support tickets.
- Validated APIs with Postman and backend data with SQL; performed functional, regression, and integration testing across freight, shipment tracking, and airport cargo modules.

Senior QA Engineer

Jan 2025 – Mar 2026

Optimus Web Solution

DLPP — Department of Lands & Physical Planning, Papua New Guinea (government) · Team of 10

- Tested a national land-management platform covering digital land records, GIS-based mapping, land allocation, registration, and physical planning.
- Developed and maintained **Selenium WebDriver (Java)** and TestNG scripts to automate regression testing.
- Validated REST APIs in Postman, checking request/response payloads, status codes, and business rules.
- Verified data accuracy and integrity across integrated departmental systems using SQL queries.
- Prepared test scenarios, test cases, and a Requirement Traceability Matrix (RTM) mapping business requirements to test coverage.
- Reported status, risks, and issues to the client through status calls, program calls, and daily scrums; presented UAT demos and end-user guide walkthroughs for each release.

Software Test Engineer (QA)

Nov 2022 – Nov 2024

Saarathi Pedagogy Pvt. Ltd.

EdTech & school management products · Team of 22

- Tested 6 web and mobile products: Publisher v2 (interactive books and assessments), Saarathi Support (role management and CRM reporting), Classroom, Saarathi Schools, and the Saarathi Student and Teacher Android apps on Google Play.
- Automated regression scenarios with **Selenium WebDriver (Java)** and TestNG.
- Executed functional, regression, smoke, sanity, integration, system, and mobile testing across web and Android releases.
- Tested APIs with Postman and supported performance testing and result analysis with JMeter.
- Managed the full defect lifecycle in ClickUp and Jira, and validated backend data with SQL.
- Contributed to test planning and effort estimation in Agile sprints; prepared daily, weekly, and monthly status reports and release test summary reports.
